

# Application topic menu

---

**A topic fixes the size and shape of the problem. It does not prescribe your branding, detailed records, validation messages or implementation choices.**

# Application topics

| #  | Application                           | Central records                         | Required workflow                | Edge case to handle                            |
|----|---------------------------------------|-----------------------------------------|----------------------------------|------------------------------------------------|
| 1  | <b>Club event registration</b>        | events, registrations                   | register for an event            | the last place is taken during submission      |
| 2  | <b>Repair job tracker</b>             | customers, items, repair jobs           | submit and update a repair       | a status change lacks required information     |
| 3  | <b>Campus resource booking</b>        | resources, bookings                     | request a date and time          | two bookings overlap                           |
| 4  | <b>Volunteer shift sign-up</b>        | activities, shifts, sign-ups            | join a shift                     | the same person signs up twice                 |
| 5  | <b>Lost-and-found register</b>        | items, claims                           | submit and review a claim        | several people claim one item                  |
| 6  | <b>Equipment loan tracker</b>         | equipment, borrowers, loans             | request and return an item       | unavailable equipment is requested             |
| 7  | <b>Academic advising scheduler</b>    | advisers, slots, appointments           | book or cancel a slot            | a slot is taken during submission              |
| 8  | <b>Workshop registration</b>          | workshops, sessions, enrolments         | enrol in a session               | a student exceeds the session limit            |
| 9  | <b>Campus queue manager</b>           | services, tickets, counters             | take and call a queue number     | a closed counter still has waiting tickets     |
| 10 | <b>Building maintenance requests</b>  | locations, requests, updates            | report and track a fault         | a duplicate fault is reported                  |
| 11 | <b>IT help-desk ticketing</b>         | users, tickets, responses               | open and resolve a ticket        | a resolved ticket receives a new response      |
| 12 | <b>Parcel collection desk</b>         | parcels, recipients, collections        | record collection                | the wrong collection code is supplied          |
| 13 | <b>Internship application tracker</b> | opportunities, applications, updates    | submit and track an application  | the deadline passes during submission          |
| 14 | <b>Scholarship checklist tracker</b>  | scholarships, requirements, submissions | complete a requirement checklist | a required document is missing                 |
| 15 | <b>Society membership register</b>    | societies, members, memberships         | apply for or renew membership    | the same student joins twice                   |
| 16 | <b>Sports training attendance</b>     | teams, sessions, attendance             | record attendance                | attendance is recorded for a cancelled session |
| 17 | <b>Book exchange reservation</b>      | books, owners, reservations             | reserve and hand over a book     | two readers reserve the same copy              |

# Application topics

| #  | Application                            | Central records                   | Required workflow                | Edge case to handle                            |
|----|----------------------------------------|-----------------------------------|----------------------------------|------------------------------------------------|
| 18 | <b>Donation distribution inventory</b> | items, batches, distributions     | record an issue of supplies      | the requested quantity exceeds stock           |
| 19 | <b>Community pantry requests</b>       | products, stock, requests         | request and fulfil a parcel      | fulfilling it would make stock negative        |
| 20 | <b>Recycling pickup requests</b>       | locations, pickups, updates       | request and complete a pickup    | two open pickups cover the same location       |
| 21 | <b>Community garden tasks</b>          | plots, tasks, volunteers          | claim and complete a task        | a completed task is claimed again              |
| 22 | <b>Laundry order tracker</b>           | customers, orders, items          | submit and collect an order      | collection is attempted before completion      |
| 23 | <b>Tailoring order tracker</b>         | customers, garments, orders       | record measurements and progress | required measurements are incomplete           |
| 24 | <b>Printing job tracker</b>            | customers, files, print jobs      | quote and process a job          | the requested format is unsupported            |
| 25 | <b>Vehicle service booking</b>         | vehicles, services, bookings      | book and complete a service      | one vehicle has overlapping bookings           |
| 26 | <b>Photography session booking</b>     | packages, slots, bookings         | reserve and confirm a session    | a slot is no longer available                  |
| 27 | <b>Pet care appointments</b>           | pets, services, appointments      | book and record a visit          | the selected service is unsuitable for the pet |
| 28 | <b>Property inspection tracker</b>     | properties, inspections, findings | schedule and close an inspection | an unresolved critical finding remains         |
| 29 | <b>Visitor appointment log</b>         | hosts, visitors, appointments     | request and record a visit       | arrival occurs without host approval           |
| 30 | <b>Competition submission tracker</b>  | competitions, entries, reviews    | submit and review an entry       | an entry is edited after the deadline          |

# Build the same depth, make different choices

## The common technical spine

- Meaningful semantic page structure and a form
- Server-side processing, validation and helpful failure messages
- Related persistent records and appropriate CRUD
- An explicit state or lifecycle
- Purposeful browser-side interaction and one justified asynchronous action
- At least one tested failure or edge case
- Explanation and security review supported by evidence

## What you still own

- Name, audience and visual identity
- Exact information each record needs
- Validation rules and helpful error messages
- Workflow that later deserves JavaScript and asynchronous behaviour
- What to leave out, and why

## Scope boundary

- Do not add payments, live chat, social networking, real sensitive personal data, AI-generated recommendations, maps, or a required external API.
- A different idea needs approval before implementation begins.
- It must still have a real user, one important task, related records, a meaningful edge case and one deliberately excluded feature.
